

®ICP Accelerometer, Model 109 Compact, Top Connector

Main Characteristics

- Annular shear mode
- 20 kHz Bandwidth
- 10, 50, 100 mV/g
- -55°C to 120 °C (-67°F to 250°F)
- Dual case isolation with Faraday shield
- Submersible version (150 metres) with associated IP68 over-molded cable
- Life time hermetic sealing warranty (M12/Mil glass seal connector)

Competitive advantage

- Annular shear piezoelectric sensors feature better frequency response, improved base strain, lower noise, smaller size, thermal transient immunity and insensitivity to cable motion. Annular shear mode is less susceptible to transverse vibrations and better immune to electronic saturation at high frequency.
- Exceptional bias voltage stability at elevated temperatures. (improved dynamic range, ex 80g dynamic for 100mV/g sensitivity)
- Resistant to shock (magnet mounting) thanks to protected Mosfet transistor input.
- ESD and reverse wiring protection.
- The glass seal hermetic connector protects the piezoelectric disc and the electronic from harmful environmental influences, significantly increasing their reliability and lifetime. Associated with low cost IP68 overmolded M12 cable assembly it is a perfect solution for submersible application down to 150 metres. Sensors with epoxy seal will always leak after few temperature cycles.
- M12 overmolded cable assembly is available through local electronic distributor
- M12 offers compatibility with sensors used in automation.

Description

The hermetic sealed industrial piezoelectric accelerometer model 109 is designed to monitor the vibration in harsh industrial environment. It uses the industry standard ©ICP 2-wire voltage transmission technique with a 4 mA standard constant current supply. Signal ground is isolated from the mounting surface and outer case to prevent ground loops. Faraday shielding will limit sensitivity to EMC to a minimum. Annular shear mode design will prevent from thermal transient and from spurious signal from high transverse vibrations. Low noise electronic and a temperature compensated design will give you accurate result over the complete temperature range. Large choice of frequency range will help to fit almost every customer requirements.

Model 109.01

Typical applications

Vibrations measurement in the rugged environments of industrial machinery monitoring. High frequency version (10mV/g) monitors the vibration on roller bearing, pumps cavitation, Medium frequency version (100mV/g) monitors overall vibration on pumps, motors, fans, ...
